

# WASTE SITE RECLASSIFICATION FORM

Date Submitted: <u>3/16/2010</u>	Operable Unit(s): <u>200-CW-3</u>	Control Number: <u>2010-017</u>
Originator: <u>K.M Whitley</u>	Waste Site Code: <u>2607-P</u>	
Phone: <u>373-4929</u>	Type of Reclassification Action:	
	Closed Out <input type="checkbox"/> Interim Closed Out <input type="checkbox"/> No Action <input type="checkbox"/>	
	RCRA Postclosure <input type="checkbox"/> Rejected <input checked="" type="checkbox"/> Consolidated <input type="checkbox"/>	

This form documents agreement among parties listed authorizing classification of the subject unit as Closed Out, Interim Closed Out, No Action, RCRA Postclosure, Rejected, or Consolidated. This form also authorizes backfill of the waste management unit, if appropriate, for Closed Out and Interim Closed out units. Final removal from the NPL of No Action and Closed Out waste management units will occur at a future date.

## Description of current waste site condition:

(Summarize status of investigation/remediation of the waste sites.)

The 2607-P waste site consists of a septic tank and tile/drain field designed to provide sanitary service to the 2743-P guard station. The guard station was demolished and the septic system abandoned in 1952. Septic tank is filled with soil.

Historical and process knowledge and physical configuration provide sufficient justification to change the site status to "rejected" as defined in TPA-MP-14 (DOE/RL, 2007). As a best management practice, focused soil samples were collected from the drain field. Analytical results were compared to the clean up values associated with the 200-CW-3 operable unit through the 100 Area ROD (EPA, 1999). Results show the site conditions would meet clean up values established for the 200-CW-3 waste sites had the site been subject to those requirements. This added information bolsters the justification to a change in waste site status to "rejected".

## Basis for reclassification:

(For closeout, reference supporting documentation, as listed in Table 3.)

Per the Remedial Design/Remedial Action Work Plan for 200 North Area Waste Sites located in the 200 CW 3 Operable Unit (DOE/RL-2007-55, RD/RAWP), the 2607-P waste site would be addressed through the TPA-MP-14 (DOE/RL, 2007) evaluation process with no sampling and analysis required. Site evaluation provides sufficient justification to change the status of this site to "rejected". As a best management practice, the waste site was sampled and the results were compared to the clean up values established for the 200-CW-3 operable unit through the Interim Action Record of Decision for the 100-BC-1, 100-BC-2, 100-DR-1, 100-DR-2, 100-FR-1, 100-FR-2, 100-HR-1, 100-HR-2, 100-KR-1, 100-KR-2, 100-IU-2, 100-IU-6, and 200-CW-3 Operable Units, Hanford Site, Benton County, Washington (Remaining Sites ROD) (EPA, 1999). Analytical results showed conditions meet the associated clean up levels and thus bolster the change in status to "rejected".

There is no deep zone for the 2607-P waste site therefore no institutional controls are required.

## Waste Site Controls:

Engineered Controls: Yes ☐ No ☒ Institutional Controls: Yes ☐ No ☒ O&M requirements: Yes ☐ No ☒  
If any of the Waste Site Controls are checked Yes specify control requirements including reference to the Record of Decision, TSD Closure Letter, or other relevant documents.
